

This is a two day advanced workshop for commercial beekeepers, crop specialists and pollination specialists. This course focuses on improving commercial beekeepers skills by keeping them abreast of new advances in bee management. Topics will focus on advanced management of honey bee health, Integrated Pest Management (IPM), pesticides, bee nutrition, breeding, genetics, pollination and commercial production of quality honey.

International and national guest speakers are annually invited to the workshop to share recent research results. Experts in the field of apiculture present a more detailed look into to the secrets of honeybee during the workshop. Thus, the participants will have better understanding of priorities in beekeeping. They can also benefit from the recent advances in apiculture and learn some of the tricks of the trade.

The workshop is offered annually in February. Dates and locations will be announced.
