

This is a special two day workshop on queen rearing and breeding. The focus of the workshop is on gaining knowledge and practical experiences in preparing queen cell builders, grafting and production of mated queens. Principles for improving bee stocks and breeding for honey production, winter-ability, hygienic and varroa resistant bees are also included. Everyone will have a chance to try preparing queen cell builders and grafting larvae to raise quality queens.

Dates and locations will be announced.

**Register early!** Class size is limited to only 25 participants
