

## Safety Glasses Quiz!

Do you need to do some research into safety glasses before attempting the quiz? Visit the Alberta Farm Safety Program website at [www.agriculture.alberta.ca/farmsafety](http://www.agriculture.alberta.ca/farmsafety). Type 'safety glasses' into the search bar in the top to watch a short video, then search 'PPE' (personal protective equipment) to read about them.

1. What kinds of tasks around the farm require safety glasses? Why?

---

---

---

2. What design features help safety glasses feel more comfortable to wear?

---

---

3. If your safety glasses fit too tight on your face, you will be **MORE or LESS** (circle one) likely to wear them?

Did you think of different answers than provided below? That's okay! There are lots of reasons to protect your eyes on the farm. Quiz your parents to see how many tasks they can think of! Take a look at the safety glasses on your farm and pick a pair that fits your face the best—why do you like them?

**Answer Key: (#1)** Think about the tasks like mowing the lawn, using the pressure washer, using the leaf blower, standing near a wood saw, chain saw or grinding wheel, processing cattle (those tail flicks and sneezes!), dusty and windy days, etc. Any time something could get into your eyes! (#2) Soft nose pieces, rubberized arms, adjustable arms, contour design to fit your face, tinted lenses, and light-weight frames all help the glasses feel more comfortable! (#3) If your safety glasses are too tight, you will be less likely to wear them. Find the ones that fit you the best!
