

Hay and Grain in Containers

Barr-Ag Ltd is Canada's leading exporter of timothy hay, non-GMO alfalfa hay, mixed hay and straw. Along with our hay varieties, we export a variety of grains in container. Unlike most other hay exporters, we are able to produce about 60% of what we sell with most of the remaining coming from local farmers who have long-standing relationships with Barr-Ag. Our product sources allow us to control our product quality throughout the production process ensuring that our product meets our standards and our customer's standards.

Barr-Ag has two factories in Alberta positioned near the eastern slopes of the Canadian Rocky Mountains where we compress and containerize hay and other forage for dairy and beef operations and horse owners around the world. We have many different packaging options for our compressed hay; 60 kg full bale, 30 kg half cut bale, and 420 kg big bale in sleeve available in 2, 4 and 8 cut.

Barr-Ag is an experienced, innovative company that offers flexible shipping options, and can take care of necessary customs documents in an effective and efficient manner.
