

Shipping Animals

Animals can become contaminated through exposure to other animals, their feces or contaminated vehicles.

- ✖ Prior to shipping check your animal treatment records to ensure that withdrawal times have been met.
- ✖ Avoid using the same trucks to ship animals and other commodities. Ensure there are no hazardous chemicals (fertilizers, pesticides, paints, etc) present in the vehicle.
- ✖ Cover the truck or trailer floor with sufficient bedding to minimize contamination from manure.
- ✖ Animals can shed bacteria during transport. Trucks should be cleaned, washed and disinfected following each shipment of animals.
