

FOMP Policy and Quality Objectives

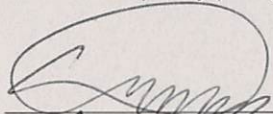

We are committed to the ISO 9001:2015 Quality Management System Requirements relative to the registration of the Forest Operations Monitoring Program.

Policy Statement

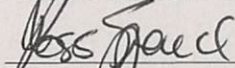

Deliver an efficient provincial Forest Operations Monitoring Program (FOMP) that meets regulatory requirements and management planning objectives which assist the Minister in achieving long-term resource stewardship. FOMP's overall goal is to achieve consistent interpretation and application of Forest Operations Monitoring methods across the Province. This will be reflected in the quality objectives set for the organization. The Agriculture & Forestry Ministry is committed to continually improving the effectiveness of FOMP.

Quality Objectives

Quality Objectives are established each year through the management review process. They provide a means of implementing the quality policy. Their performance is reviewed at least every six months, to determine how well targets are being met.
