Nutrient Content of Typical Agricultural Livestock Manures

Explanation

This is an estimate of the available nitrogen plus the portion of the organic nitrogen that is mineralized over the growing season. Estimated volatilization losses are subtracted from the sum of available plus mineralized nitrogen to give the Crop N.

Manure Production for Various Livestock Types

Explanation

The following design volumes and weights are the average volumes and weights expected from typical livestock housing systems in Alberta. Actual volumes and weights could differ due to variations in housing systems, type of manure storage, amount of dilution or wash water, precipitation, bedding, mechanical drying and treatment. These variables should be taken into account and adjustments made where appropriate.
