## Who are we?

# The Road to Net-Zero

**NEW buildings – annual energy consumption targets for an office building in Alberta**

**Conventional Office building [1.8 GJ/m<sup>2</sup>]**

**70% by 2015 [.54 GJ/m<sup>2</sup>]**

**80% by 2020 [.36 GJ/m<sup>2</sup>]**

**90% by 2025 [.18 GJ/m<sup>2</sup>]**

**Carbon Neutral by 2030 [no fossil fuel energy to operate]**

- 5,000 m<sup>2</sup> at 1.8 GJ/m<sup>2</sup> = 9000 GJ = 270,000 L of Gasoline , 414,000 kilos of coal to generate the energy required**

# What are some of our approaches?

1. Building Form and Orientation
2. High-performance envelope
3. Shading the South
4. Opening the North
5. Operable Windows
6. Green Walls / Green Roofs
7. Daylit Workplaces
8. Low-energy vertical circulation
9. Re-using Existing Buildings
10. **Good Material Selections**

# What is the take home message?

- We firmly believe that sustainability should be integrated at every level of design.
- To do this we need products and materials that:
  - Have low embodied energy.
  - Do not contain potentially hazardous materials in the final product or use them during manufacturing.
  - Are socially ethical.
  - Are manufactured locally and sustainably.
- We make thousands of decisions on each project-  
Make it **easy** for us to want to choose your products.

# How are we classifying sustainable buildings in North America?

- Leadership in Energy and Environmental Design (**LEED**)
- Living Building Challenge – Full and Petal Certification

LIVING  
BUILDING  
CHALLENGE™

# What is LEED?

- LEED is the “Esperanto” of the Green Building World.
- A language that many have learned across our industry.
- LEED has more and more have become a set of “minimum” standards.
- **The future goes beyond LEED.**

# Living Building Challenge

- Developed by **the International Living Future Institute**. Most advanced measurement of sustainability in the built environment.
- **The LBC acts to diminish the gap between current limits and ideal solutions.**
- 7 petals – Site, Water, Energy, Health, Materials, Equity and Beauty.

# Jim Pattison Centre of Excellence in Sustainable Building Technologies and Renewable Energy Conservation – Penticton , BC

# Let's Talk Material Rating

GROUNDBREAKING  
SUSTAINABLE  
BUILDINGS.

# LEED: Building Material and Sustainability Classifications

- **Indoor Environmental Quality (IEQ) credits.**
  - **Low volatile organic compounds emitting materials**
    - adhesives and sealants
    - paints and coatings
    - flooring systems
- **Rapidly Renewable materials.**
- **Certified Wood.**
- **Recycled Content**

# LBC Material Petal Requirements

- **RED LIST** compounds
- Embodied Carbon Footprint
  - Responsible Industry
  - Appropriate Sourcing
  - Conservation + Reuse

# Responsible Industry

- We must advocate through our design and specifications for the creation and adoption of third-party certified standards for sustainable resource extraction and fair labour practices.
- Applicable raw materials include stone and rock, metal, minerals, and timber.

# Conservation + Reuse

- **Material conservation Management Plan:**
  - The goal is to reduce or eliminate the production of waste during four phases - **design, construction, operation, and end of life** in order to conserve natural resources.

Material	Minimum Diverted/Weight <sup>67</sup>
Metals	95%
Paper and Cardboard	95%
Soil, and biomass	100%
Rigid Foam, carpet & insulation	90%
All others - combined weighted average <sup>68</sup>	80%

Phthalates

Pentachlorophenol

Formaldehyde

Freon-11

Freon-12

CFCs

Neoprene
