

Natural Health Products Program

NRC-CMRC

Aquatic and Crop Resource Development

Commercialize science-backed NHPs

Companies involved in Canada's Natural Health Product (NHP) and Functional Ingredient (FI) value chain can count on NRC's Natural Health Products Program to help them develop, differentiate and create value for their products, in market or in development. We apply our technical expertise to provide clients with custom analytical, preclinical and lab-scale R&D services. We also connect clients with reputable contract research organizations (CROs), clinical trial sites and regulatory service providers.

Strengthening Canada's NHPs

If after working with us you are getting new products to market faster, attaining regulatory milestones or hiring more employees, then that's a win for you, for us and for Canada. Let us help you enhance Canada's global competitive position for NHPs.

- Develop your new high-value NHPs
- Differentiate your products through science-supported NHPs and functional ingredients (FIs)
- Create NHP and FI product line extensions and new formulations
- Develop FIs from Canadian bioresources and waste streams

Discerning consumer of natural health products

Your NRC Advantage

We can custom develop our research and technology capabilities to fit your needs, ranging from ad-hoc, immediate technical services through to longer term, strategic opportunities.

- Product efficacy: mechanism of action, bioavailability and dose, scientific proof for claim support

- Value-added development: ingredient characterization
- Product formulation: product synergies, new ingredients and substitutes, functionality of formulated product
- Product safety: QA/QC and quality methods support, product risk analysis and toxicity, supporting regulatory tests

Natural Health Products Program

Co-developed
products
•
Enabling technologies
•
Technical and
advisory services

Trust a proven, winning combination

- Multidisciplinary research teams, including scientists and technicians with industry-relevant experience
- Track record of success with NHP partners' commercial achievements
- Product development experience
- Product testing expertise
- Custom applications and enabling technologies
- Dedicated access to and training on specialized equipment and advanced infrastructure

NRC: Canada's Research and Technology Organization

- Client-centric programs to address industry needs
