

Potatoes

Parkland Potato Varieties is a potato variety marketing company that introduces new potato varieties to Canada, the United States and Mexico. Together with our partner, Agrico, we introduce new and improved varieties for the global market, selecting unique potatoes for each region's particular climate, soil type, or palette.

The Agrico varieties are naturally bred to meet the ever-evolving demands of North American processors and consumers. Potato varieties are selected based on critical factors of yield, sustainability, and marketability. Parkland specializes in red and yellow skinned fresh varieties, as well as processing, creamer and fingerling potatoes.
