

Steel Livestock Handling Equipment

Equipment Built to Last Generations

2W is a locally owned manufacturing company that has been in business since 1988. Located in Nanton, Alberta, the heart of cattle country 80km south of Calgary. The company is committed to providing top quality livestock handling equipment for the cattle, horse, bison and rodeo industries.

All equipment is powder coated for a long lasting durable finish. Our steel is ASTM A-500 grade approved tube. We are continually improving our facility with manufacturing processes, for example robotic welders and laser cutting. The strength of steel used in our equipment is what separates us from our competition.

2W has developed an extensive distributor network throughout Western Canada, the United States and Sweden. New markets and products are constantly being sought and developed which keeps 2W on the leading edge in its market.

2W is Freight on Board (FOB), Nanton. Our team will work with new partners to coordinate orders and shipments to minimize freight costs and maximize the loads.

2W Livestock Equipment Ltd.
