## Cold Pressed Canola Oil

Pleasant Valley Oil Mills, proudly and passionately produces the healthiest and highest quality cold pressed, NON GMO, edible, farm-to-table sunflower and canola oil and meal for commercial sale at our facility in the heart of canola country in Central Alberta, Canada. Custom bottling or bulk distribution available.

Using the best in cold-pressing technology, we separate oil from seed using a state-of-the-art steel press and eliminate the need for any unnecessary and unhealthy additional processing, such as bleaching and deodorizing which are used in over 99% of oils. This results in a more natural, clean, and better tasting product that most importantly maintains the full nutritional values nature provides as well as the aroma and buttery flavour.

With 100% of our heart-healthy, non-GMO canola seeds being sourced from our own farmyard and local sustainable farmers, food manufacturers globally can trust in the quality and flavour of our oils and meal. As a community that wholeheartedly believes in community, we pour our hearts into every seed so you can rest assured that it's good for yours.
