

The TireGrabber

The **TireGrabber** is an innovative piece of machinery used for changing largescale tires within the agricultural and construction industry. The TireGrabber is easily attached onto skid steers, bobcats, front end loaders, tractors or forklifts. It allows tires to be tilted, swiveled, rotated and picked up.

We currently have four different models to choose from depending on your needs.

The TireGrabber

Currently exporting to: United States

Planning to export to: Europe, Australia, South Africa
