# BACKGROUND -- For the Teacher

Riddles appeal to most of us, no matter our age. It is satisfying and challenging to decipher clues and come up with the right answer.

This lesson gives students a chance to read and solve some rhyming riddles. Visual skills are also an important part of learning, and this simple activity shows how objects can be grouped by color.

It might be helpful if you brought to class some of the objects represented in the pictures. In that way, children can also get a tactile experience.

## PROCEDURE

### Part 1

- The Colors 1. Go through each of the student resource sheets with your pupils, specifying the color and having the children identify the pictures.

**HINT:** You can make this activity much easier by photocopying the task sheets onto appropriately colored paper.

### Part 2

- Extending 2. Choose riddles at random, and read each one to the class, allowing them time to find the answers.

### Part 3

- The Riddles 3. For each of the student resource sheets, have the class name other agriculture-related things that are the same color. Write these as a list.
4. Ask the children to think of other riddles that find things by color.

## DISCUSSION QUESTIONS

1. What colors are most common in agriculture?
2. How many colors can you find in a picture of a farm?

## RELATED ACTIVITY

1. Make an agriculture collage of colored pictures organized into color zones.
