Information:

- Areas for Non-Forest Vegetated, Non-Forest and Roads stay the same in 1999, 2009 and 2019.
- Harvested land is the same landbase as forested (COMPLAN), but stand height is less than 5m .
- For calculation of recovery %, all stands in the category forested were used, which are less than 5m in height. This includes
- Clear-cut stands (CC) and other regenerated stands (for these ones there were no information about harvest method, windthrow or burn)
- For all stands with negative BHAGE , the height was calculated as follows : $\{[1.3m / (Total\ Age - BHAGE)] * Total\ Age\}$.
- The hydrological recovery is depending on the stand height. It is calculated as $standheight * 20$. Stands $\geq 5m$ height are recovered 100%.
- The Overall ECA Area is calculated as $\{[(100\% - \%Recovery) * Area/ha] + Road\ Area\}$.
- ECA Percentage calculation :Divide overall ECA Area by watershed through the sum of Forested, Non_Forest Vegetated and Roads area by watershed.
- Watershed # 1, # 2380, # 2382 were divided in Bull Trout and Non- Bull Trout watershed. Separate ECA calculations were done for each.
