### The 4-H Motto

"Learn To Do By Doing."

## The 4-H Pledge

I pledge

My **HEAD** to clearer thinking,

My **HEART** to greater loyalty,

My HANDS to larger service,

My **HEALTH** to better living,

For my club, my community and my country.

### The 4-H Grace

(Tune of Auld Lang Syne)

We thank thee, Lord, for blessings great On this, our own fair land. Teach us to serve thee joyfully, With head, heart, health and hand.

### **INTRODUCTION**

Welcome to the 4-H NESTBOX project. In this project, you will learn about cavity-nesting birds and will be able to construct, set out, and look after your own nesting boxes and brackets. Nestboxes and brackets provide artificial "housing" for cavity-nesting bird species and are especially important for their decline has been the loss of many of their natural nesting sites and the out-competition by House Sparrows and European Starlings. Cavity-nesting birds require a cavity or hole to nest in. Some cavity-nesting species, such as woodpeckers, chickadees and nuthatches, are able to excavate (dig out) their own cavity. These are called primary cavity-nesters. Others such as bluebirds and tree swallows cannot excavate their own cavity, so rely on primary cavity-nesters to provide their sites for them. These birds are called secondary cavity-nesters. The use of nest boxes and brackets, therefore, will provide our native species with sites that might otherwise be unavailable. You do not have to be a carpenter or a professional bird watcher to have a successful nestbox or bracket trail. If you follow the guidelines on construction, placement and monitoring, you will most likely be successful at attracting at least one bird species. You will not only be helping the birds, but you will also be gaining a better understanding of wildlife in a fun and enjoyable way.

This project was produced and funded in cooperation with Home Economics and 4-H Branch of Alberta Agriculture, Food and Rural Development and the Ellis Bird Farm Ltd..

#### OTHER ENVIRONMENT PROJECTS

You may be interested in completing "LIVING WITH WILDLIFE" and "WORKING WITH WLDLIFE" projects, and 4-H "PHEASANT PROJECT" and 4-H "ENVIRONMENT PROJECT". Contact your district office for details.

#### **ACHIEVEMENT DAY**

Near the end of this project, club members should hold an Achievement Day where you will tour each member's nestbox trail. You may give a short talk on the ecology, behaviour and conservation of the birds that have used your nest boxes and brackets, discuss the success rates of each box and comment on some interesting observations you have made, ways you can improve your trail, and how much time you spent on the project. Your record book, which will be nearly completed by then, should be on hand for other members to view.

## **INDIVIDUAL PROJECT**

Your project should consist of at least six boxes. Ten boxes will be the maximum number you should build under this program. You will want to read the introductory sections of the accompanying project manual entitled NESTBOXES FOR PRAIRIE BIRDS before starting the project. Plans for building nest boxes are included in this book.

During the course of the project, you will record observations on the ecology and behaviour of the birds which use the boxes or brackets. You will also record the activities in each box. Photographs of the habitat around each box and a detailed map of your trail will also be included.

## NEST BOX TRAIL MAP

A map will help you determine the best locations for your boxes or brackets and will make it easier for others to find your trail. Try to make your map as detailed and as close to scale as possible.

## **LEGEND**

Fenceline	Outside edge of Farm Site	-
Roads	Forage Crop	Barley
Buildings	Summer fallow	Oats
Pond or Lake	Grassland	Wheat
River or Stream	Ungrazed	Other
Shrubs or Aspen Trees	(please indicate by color	
Conifers (Spruce or Pine Trees)	Pasture	
Identify location of each box by it's number		
	Scale: 1 cm =	

## **LOCATING YOUR BOXES AND BRACKETS**

You have set out each box in a certain habitat and at a certain site in hopes of attracting certain bird species. After you have placed your boxes, give one or two reasons for placing each of them as you have. At the end of the season, you can fill in the last column, indicating if you were indeed successful at attracting the bird you wanted. Be sure you carefully read through the species descriptions in the reference book so that you are not trying to attract a species that does not even occur in your area!

Box No.	SITE CHOSEN	DESIRED SPECIES	REASONS FOR CHOOSING THIS LOCATION	SPECIES ACTUALLY USING BOX

Box # 10				

# OBSERVING THE ACTIVITIES AT YOUR NESTBOXES AND BRACKETS

By quietly observing your box or brackets from a safe distance (at least 10m), you can learn many fascinating things about bird behaviour. Using binoculars or a spotting scope will help you observe activities around the box without disturbing the birds. Before you begin these observations, you should carefully read the section "Setting Up A NestBox Trail" (p. 10, "Nextbox For Prairie Birds" manual). You may want to get more detail on your species from other books as well. Once a bird has taken up residence in your box or on your bracket, you should then study as much as possible about that species. See the species discussions in the manual for general information. Remember: it is more important that the birds are successful at raising a family than it is to collect information on them.

The record pages are organized into a number of topics. Following is a list of suggestions for organizing your observations.

**DESCRIPTION:** What is the physical appearance of the bird; its size, shape, color, type of

beak and feet, special markings, differences between sexes?

**MIGRATION:** Is the bird a resident or a migrant? If it is a migrant, record when you first

see it in the spring and note when the species departs in late summer or

early fall.

**ABUNDANCE:** How many of this species have you seen during the breeding season? Are

they common birds? Un Alberta? In your area? Do they tend to move about in flocks, or are they solitary? Do they concentrate their activities

in certain locations or habitats?

**TERRITORY:** How much area does the pair claim as their own? How do they defend

this territory? Are others of their own kind allowed to come into the territory? Are other species of birds kept out? Do they defend their territories against other intruders (e.g., cats, people, horses, etc.)?

Describe some of the interactions you observe.

**COURTSHIP:** Describe the courtship activities that you observe. Some of these

activities are very complex and difficult to distinguish. Try to identify some of the behaviors associated with selecting a nest site, selecting a mate, courting and mating. Some of these behaviors will include special flight patterns, such as hovering and fluttering the wings, and such

displays as bowing to each other and rubbing bills. Where is most of this

activity concentrated?

# **NEST BUILDING:**

Describe the type of nest the species makes. What materials are used? Is the base material different from the lining? Does the cup part of the nest take up the whole floor area, or is it placed in one corner? How long does nest building take? Does it appear that the birds abandon the nest at times? Which of the parents constructs the nest?

### **BREEDING:**

How many eggs are laid? How frequently are the eggs laid? What is the egg color and size? Which parents incubate?(Both?) For how long? What happens to the egg shells after hatching? Who carries out the fecal sacs, and for how many days is this done following hatching? Are the young fed by both parents? Does one parent capture food and transfer it to the other to feed the young? Is the food prepared in any may before it is fed to the young? Are the young brooded after hatching? For how long? What is the role of the male in rearing the young? What happens when the young fledge?

### **FEEDING:**

What kind of food does the bird eat? What habitat does it hunt in? How is prey captured? How frequently does it feed? Are the young fed by both parents? Does one parent capture food and transfer it to the other to feed the young? Is the food prepared in any way before it is fed to the young? Are the young fed after they fledge?

### **FLEDGING:**

Do the young stay around the nest site after they have fledged? If so, for how long? How long does the family unit stay together?

### **OTHER:**

Have you made any other observations which don't seem to be covered in the above categories, or have you observed some behaviour which is puzzling?

### **KEEPING TRACK OF YOUR TRAIL**

Keeping a careful record of the activities in your boxes or brackets makes a project of this kind much more interesting. You can keep records of which boxes or brackets are used by what bird species and of the egg-laying, hatching, fledging, etc, dates. Not only is this information interesting, it is also important for specific studies. Much has been learned about the breeding biology of cavity-nesting species through observations on nestbox trails.

You will be using this record book to collect your information. While most of the terms found on the record form are self-explanatory, this quick review should ensure you fill it in correctly.

- 1) **Nestbox Number** the number that you have assigned to your box.
- 2) **Year** the year in which the information is collected.
- 3) **Land Owner** the person on whose land the trail is located.
- 4) **Location** given by land location and the distance from the nearest town.
- 5) **County or municipal district** the county that your box is in.
- 6) **Latitude and Longitude** determined by looking at a topographical map.
- 7) **Habitat** can be chosen from the following list
- 8) **Box Height** the distance between the bottom of the hole and the ground.
- 9) **Mounted-On** from this list:
  - 1. Grassland
  - 2. Cereal Crop
  - 3. Hayfield-Forage Crop
  - 4. Summerfallow
  - 5. Farmyard
  - 6. Urban Yard
  - 7. Urban Park
  - 8. Golf Course
  - 9. Cemetery
  - 10. Lake or Pond Site

- 11. Stream Bank
- 12. Mixed Forest
- 13. Deciduous Forest
- 14. Coniferous Forest
- 15. Brush/Shrubland
- 16. Badlands
- 17. Alpine Tundra
- 18. Acreage (no farm buildings)
- 19. Other (specify

- 10) **Floor Size** the total floor area (in cm2).
- 11) Hole Size the diameter of the entrance hold (in mm).
- 12) **Species** may be abbreviated. MB (Mountain Bluebird); TS (Tree Swallow); HS (House Sparrow); ES (European Starling); BCC (Black Capped Chickadee); ect.
- 13) **Number of Eggs, Number hatched, etc.** fill in after each phase has been completed.
- 14) **Date Hatched** the day the young hatched.
- 15) Cause of Nest Failure if a next was started in a box, but young never fledged, list one of the following reasons: House Sparrow, Other Birds, Mammals, Vandalism/Disturbance, Weather, Parasites, Structural Failure, Other.

## **NESTBOX RECORDS**

Fill in one form for each box that is used. If possible, include a photo that shows the box and the surrounding habitat.

# OBSERVATION NOTES

		ODDLI	VIIIONIOIES
DATE	TIME	<b>SPECIES</b>	ACTIVITIES OBSERVED
May 10	8: 00 a.m.	M.B. ?	Male MB near box. No nesting material. Both male
May 11	10:00 a.m.	M.B.!!	and female near box. Female observed sitting on
			fence while male hovered near her.
May 15	8:00 a.m.		Nest almost complete. Both adults nearby/
May 17	7:00 a.m.		Nest complete. Cup at back of box.
May 18	7:30		1 egg. Male appeared upset when I approached.
May 24	8:00 a.m.		7 eggs. Female left nest as I checked box.
May 30	10:00 a.m.		Female incubating. Did not leave the nest.
June 5	4:00 p.m.		5 young. 2 eggs. Just hatched. Male with fecal sac.
June 10			6 young. 1 infertile egg removed. Both parents busy
			feeding young. Male dove at me.
June 16	10:00 a.m.		5 healthy young. 1 dead, removed. House Sparrow
			came near box, and was chased away by male.
June 23	8:00 a.m.		All young fledged. Box cleaned out. 2 young seen
			near box in tree-calling to parents.
June 25	2:30 a.m.	T.S.?	T.S. near box.
June 30	3:30 p.m.	T.S.	T.S. nest almost complete. I brought a handful of
			chicken feathers – They took them out of my hand!
July 5	8:00 a.m.		1 egg. No adult seen.
July 7	7:00 a.m.		2 eggs. Both adult on box lid. Mal bowing to female.

## **SUMMARIZING YOUR WORK**

These last pages are for you to summarize the activities on your trail.					
Describe some of the interesting experiences you had on your trail:					
What did you enjoy most about this project?					
How could you improve your trail?					

Will you relocate any of your boxes next year? If so, where will you move them to? If not, why?
Did you have any boxes which were put in good locations, but did not attract the desired species? If so, suggest why this may have happened.
Why is it important to save forests that have snags and dead trees in them?
Why are cavity-nesting birds important?
