

WEEDS

Not all Flowers are Friendly

IDENTIFY • PREVENT • CONTROL

Did you know that Strathcona County is host to invasive noxious weed species? Plants are categorized as "noxious" when they are aggressive, difficult to manage and invasive in nature.

These plants:

- infest pastures and crops
- alter natural habitats
- compete with our native plants
- affect animal, insect and bird species
- are costly to control

Noxious weeds are to be controlled as required under provincial legislation; the Weed Control Act. All landowners have the responsibility to control noxious weeds on their lands.

Use this information to help identify noxious weed species.

Encourage neighbours to control noxious weeds along with you.

Noxious weeds do not adhere to our borders or fence lines. It is up to all of us to help prevent their spread.

A County Weed Inspector would be happy to stop by for an individual consultation to answer any questions you may have.

On an inspection of your area for noxious weeds, it was noticed that your property has the following noxious weeds growing.

Canada Thistle

Purplish flowers with distinctive 'fluff' in late summer. Leaves are prickly.

Scentless Chamomile

Multiple daisy flowers. Leaves are fine and feathery.

Common Tansy

Clusters of yellow 'button' heads and deeply toothed leaves.

Yellow Toadflax

Flowers resemble snapdragons. Reproduces by seeds and roots.

Leafy Spurge

Long, narrow, waxy leaves with greenish-yellow umbrella-shaped flowers.

Field Scabious

Flowers are blue to purple, leaves are deeply divided.

White Cockle

Five white, deeply notched flower petals, prominent oval leaves.

Ox-eye Daisy

Single flowers are on long slender stems. Shallow roots and wide glossy leaves.

Location of weeds: _____

CONTROL

- Under the provincial Weed Control Act, landowners must control these weeds.
- Noxious weeds may be controlled by hand pulling, digging, mowing or using an appropriate herbicide as per label directions.

PREVENTION IS BEST

- Inspect your entire property regularly and control noxious weeds early.
- Keep vehicles clean; they transport weed seeds.
- A healthy lawn can overpower most weeds.
- Be cautious when planting wildflower seed mixes - noxious weed seeds have been identified in the mixes.
