

# Alberta AgriProfit\$

*Sign-up for a customized business analysis of your farm to maximize profits and lower your costs.*

## **AgriProfit\$ – your customized business analysis**

Participation on the AgriProfit\$ Business Analysis and Research Program will give you a customized business analysis of your farm, and your key enterprises, that you can use to help identify and manage costs towards increased profitability. Your farm information is confidential. Apply before December 1st of each year. Intake is limited. There is no cost to you.

### **Understand your Business**

An AgriProfit\$ analysis helps measure your costs and includes valuable management information. The analysis will help you focus on things that matter and where you will get the biggest “bang for your buck”.

Understanding your business is the foundation to growth and success.

When you agree to participate on the AgriProfit\$ program, we will send you a number of data collection forms (also in electronic format) to pull together the details of your farm. A farm visit will be arranged to help you complete the forms. Once all your data is collected and reviewed, you will receive your customized farm business analysis report.

## **An AgriProfit\$ analysis:**

- details your production costs and returns for your beef, forage, grazing, and crop productions on a per unit basis. (i.e: per cow, per lb. weaned, per bushel, per tonne.)
- provides the information needed to help assess practical, on farm management options.
- supports annual budgeting and strategic planning, which are more effective when you use your own costs.

Knowledge of your production costs is an important element in managing and controlling your business. There is no cost for the AgriProfit\$ business analysis – your investment is time and the benefits are considerable.

Data from all participants is used to establish provincial benchmarks. This information is used as reference for producers and industry.
