

Farm Energy and Agri-Processing (FEAP) program Eligibility

Program background

The Farm Energy and Agri-Processors (FEAP) program will share costs with producers who are upgrading components of their grain dryers to high-efficiency models, either as part of a new dryer, or when retrofitting components of an existing dryer.

The Government of Alberta will continue to take steps to help the agricultural industry transition to technologies that help the industry increase efficiency and reduce overall carbon emissions while ensuring the economic viability of the sector.

More information about the FEAP program can be found on the program website: www.agriculture.alberta.ca/feap

New Grain Dryer Components

Upgrade options on new dryers are considered if they are an optional upgrade from the standard new dryer configuration. Only cost of the options is eligible, not the cost of the standard dryer.

Program applications must include a detailed quote and specifications or calculations demonstrating energy savings.

Examples of eligible new components include upgrade options such as:

- heat exchangers
- preheat systems utilizing exhaust air
- optional high-efficiency burners
- variable speed drives (VSD) for electric motors
- optional automated moisture controllers
- gravity-fill roofs used in place of powered leveling augers

Components that are considered “business as usual” (e.g. bins, conveyors, legs, aeration fans, etc.) are ineligible for this program.

For more information about eligibility, see the FEAP program [Funding List](#) and [FAQ](#) sheet.

Program eligibility

Retrofit Grain Dryer Components

Eligibility is determined on a case-by-case basis. Program applications must include specifications or calculations demonstrating energy savings of the proposed upgrades.

Examples of eligible retrofits may include:

- hopper covers
- automatic moisture controllers
- new high-efficiency burners
- variable speed drives (VSD) for electric motors
- PTO to electric motor conversion
- insulated plenums
- exhaust air recirculation systems or secondary heat exchangers
- gravity-fill roofs that replace powered leveling augers

Please note:

Applicants must meet all other eligibility requirements set by the [Terms and Conditions](#) of the program.
